American Heart Association offers information and education about heart disease, prevention, and treatment.

Heart disease – also called cardiovascular disease and coronary heart disease – is a simple term used to describe several problems related to plaque buildup in the walls of the arteries, or atherosclerosis. As the plaque builds up, the arteries narrow, making it more difficult for blood to flow and creating a risk for heart attack or stroke.

Other types of heart disease include heart failure, an irregular heartbeat – or arrhythmia – and heart valve problems. To learn more about heart disease and conditions that can lead to heart disease, heart attack or stroke, [visit the website](#). Conditions discussed include:

- Arrhythmia
- cardiac arrest
- cardiac rehab
- cardiomyopathy in adults
- cardiovascular conditions of childhood
- cholesterol
- congenital heart defects
- Diabetes
- heart attack
- heart failure
- high blood pressure
- HIV and Your Heart
- metabolic syndrome
- Peripheral Artery Disease (PAD)
- and stroke

The website also includes a High Blood Pressure Health Risk Calculator, a Diabetes Health Assessment and an Interactive Cardiovascular Library which has informative illustrations and animations to help you learn about conditions, treatments, and procedures related to heart disease and stroke.

Visit the website to find your local office to contact them individually.
