United Network for Organ Sharing (UNOS) brings together medicine, science, public policy and technology to facilitate organ transplanted in the United States.

- The Organ Center matches donors to recipients and coordinates the organ-sharing process 24/7.
- The Technology Group maintains the database that contain all clinical transplant data.
- The Research department performs data analysis, fills data requests, and produces data reports.
- Professional services offers support to members of the transplant community, including seminars and educational programs.
- Patient Services provides assistance to patients, family members and friends and sets professional standards for efficiency and quality patient care.
