First Step Development Group offers personal emergency response systems (PERS), land line and wireless units, as well as Fall Detection and medication management systems. Family members or rescue squad will be alerted with just one push of the button on a pendant worn on a neck cord or wrist band.

Our wireless mobile PERS system also comes with GPS monitoring services and

allows loved ones to go where they want and aren't confined to their home.

FSDG Fall Detector will notify the monitoring station without having the button pushed when an individual falls. The Care Center provides immediate assistance. Family, friends and emergency services are alerted.

FSDG Medication Management Systems fit any situation, regardless of the number of medications, size of the pills or even if over the counter pills, vitamins or other supplements are taken regularly. If the person fails to take his or her medication when it is dispensed, the system will automatically send a signal to the Care Center.

FSDG Wireless medical alert system uses a nationwide wireless network to instantly contact our emergency certified EMT operators when you need assistance by simply pressing the iHelp button. Our EMT Operators are certified and available 24/7. Text the wireless PERS unit to access GPS location of loved one.

The EMT certified staff are multi-lingual and available 24/7. EMT Center can translate over 150 different languages.
